

Dr. K's Electrical Engineering class has been my favorite course throughout high school, therefore I was thrilled to be offered the opportunity to be a teacher's assistant. My own Electrical Engineering class was a tremendous learning experience for me and I love that I am able to reciprocate and share some of what I learned with the current students. Being a teacher's assistant has been valuable in terms of my own personal growth; I have further expanded my engineering knowledge since teaching and explaining engineering principles requires a thorough understanding of concepts. Additionally, the responsibility of being a teacher's assistant has been gratifying as Dr. K has often given me the opportunity to guide classroom lessons and help students one-on-one. As a future engineering major, my teacher's assistant role with Dr. K has reinforced my enthusiasm for engineering. I like to think that I am playing a small role in inspiring students in the class as much as I was inspired by the course content in Electrical Engineering.
