

My experience as a teacher's assistant for electrical engineering was only positive. I got a great chance to review and test my knowledge on the course. I also learned new skills such as guiding the students on the right path to solving the given problem and solving a problem without context. I was also given the chance to teach a lesson about the seven segments to the class. This was a fun, learning experience. Through this and various other opportunities I have grown in many areas. It was very enjoyable to teach and help others about a topic I am passionate about. – Lucas Aulisi
