

## DLD Course Review

Overall I had a positive experience from being in Digital Logic Design. I felt a great sense of community from being in the class. In the beginning, I really struggled to keep up with everyone and even considered dropping the course, but with the support from Dr. K, I continued to work hard and managed to come out with an A-. I really enjoyed the challenging labs that were assigned and feeling the great sense of accomplishment when the circuits worked. I felt that the course really taught me how to problem solve and depend on others when problems arose. Through this course I was able to experience and learn through failure in a low stakes environment. I especially enjoyed the later parts of the course where logic and boolean algebra were applied. After a while I found myself looking forward to DLD as it was hands on and really made me want to think. Although I struggled a lot in the beginning of the course, my classmates and teacher were always there to help out. I would recommend this course to anyone who is interested in thinking outside of the box and enjoys conceptual/applied math such as logic.
